

# Expertise For Enterprise Data

Fortified Data is a full-stack IT partner focused exclusively on data. We proactively plan and design data systems for performance and scalability. Our success isn't measured in awards and accolades—though we have them. Instead, we succeed when our clients succeed.

## The Enterprise Data Services You Need

### *On-Demand, Advanced Capabilities*

Fortified Data operates as a catalyst for change, guiding our clients in their quest to make more effective use of strategic and operational data. Enterprise Data Services delivers database solutions, including database development, cloud strategy, data movement, and presentation.

### Cloud Strategy

Cloud migration gives organizations accelerated productivity, agility, and scalability in their systems.

### Data Movement

Convert, integrate, and distribute data across multiple applications efficiently and at-scale.

### Database Development

Designed for performance and scalability to help better manage the data ecosystem.

### Data Analytics And Presentation

Help your business understand its data. Delivering data-driven answers to deeper questions with real-time reporting and visualizations.

### Performance Tuning And Troubleshooting

Leverage Fortified Data's full-stack knowledge to solve complex data problems, and optimize your mission critical processes.

### DevOps

Continuous integration and environment automation critical to developing efficiencies in today's ecosystems.

# Core Health<sup>®</sup>

## Optimizing Your Server And Database

Fortified Data's Core Health<sup>®</sup> service works to improve your data ecosystem, supporting greater stability of all servers in the database environment. We start by leveraging our full-stack knowledge to create a Data Tier Assessment, which informs the targeted roadmap to greater stability, scalability, and capabilities.

We designed the Core Health<sup>®</sup> service to focus on your data's foundation. Once we achieve stability, Fortified Data works with your business and technology teams on the strategic roadmap. We will identify and understand your goals before delivering specific Core Health<sup>®</sup> services, designed to safeguard the lasting stability and availability of your entire Data Tier.

Core Health<sup>®</sup> delivers the following services:

## Measuring Your Success

We measure our results against three key metrics—stability, scalability, and capabilities—matching what many organizations measure themselves against. We encourage clients to think of new ways to achieve stable, healthy environments.

### Stability

- Improve platform strength
- Reduce outages
- Increase uptime
- Predict response times

### Scalability

- Increase transactional volumes
- Optimize cloud design and migration
- Increase concurrency
- Reduce resource consumption
- Enable analytics environment

### Capabilities

- Greater ROI
- Cloud architecture and implementation
- Data movement - ETL
- Automation - DevOPS
- Data presentation - PowerBI, Tableau
- Big Data and stream analytics
