

Managed Services For Enterprise Data

Fortified Data serves both fast-growing, nimble companies as well as some of the largest, more complex organizations in the world. We apply our years of consulting experience in the Data Tier to keep our clients available and scalable.

Empower Your Teams With More Capabilities

Instead of building a task-based Managed Service, we partner with each client, becoming agents of change over the course of the engagement lifecycle—so you can take on higher-impact work and focus on the ROI that drives your business. Fortified Data's specialization in maintaining complex, mission-critical environments enables growing companies to scale quickly and manage environments with thousands of instances, while our services guarantee the health of the entire data ecosystem.

We Measure Our Results To Measure Your Success

We measure our results against three key metrics—stability, scalability, and capabilities—matching what many organizations measure themselves against. We encourage clients to think of new ways to achieve stable, healthy environments.

Stability

- Improve platform strength
- Reduce outages
- Increase uptime
- Predict response times

Scalability

- Increase transactional volumes
- Optimize cloud design & migration
- Increase concurrency
- Reduce resource consumption
- Enable analytics environment

Capabilities

- Greater ROI
- Cloud architecture and implementation
- Data movement - ETL
- Automation - DevOPS
- Data presentation - PowerBI, Tableau
- Big Data and stream analytics

Core Health®

Optimizing Your Server And Database

Fortified Data's Core Health® service works to improve your data ecosystem, supporting greater stability of all servers in the database environment. We start by leveraging our full-stack knowledge to create a Data Tier Assessment, which informs the targeted roadmap to greater stability, scalability, and capabilities.

We designed the Core Health® service to focus on your data's foundation. Once we achieve stability, Fortified Data works with your business and technology teams on a strategic roadmap. We will identify and understand your goals before delivering specific Core Health® services, designed to safeguard the lasting stability and availability of your entire Data Tier.

Core Health® delivers the following services:

Enterprise Data Services

On-Demand, Advanced Capabilities

As a leader in the data platform, Fortified Data operates as a catalyst for change, guiding our clients in their quest to make more effective use of strategic and operational analytics. Enterprise Data Services builds on Core Health® and delivers services including database development, cloud strategy, data movement, and presentation.

The Fortified Data Difference

Fortified Data is a next-generation, full-stack IT partner focused exclusively on proactively planning and designing data systems for performance and scalability. Our results-driven commitment means we succeed when our clients succeed. Whether you need data management or a comprehensive data strategy, Fortified Data works closely with you to take your organization to the next level.
